Please see my prior email for boundary discussion. I have meetings all day and cannot do a call today. I will have Ursula find times we can meet.

Barbara,

As I explained in my earlier email, Jill and Jeff spoke and what I have heard is that Stevens can not provide you with the boundary condition info you had asked for and that that you are requesting HydroQual's assistance with this task. That is what I heard but it was third hand.

I was asked to schedule a meeting/conference call between NJDEP including Jill and Jeff to address this issue. I am in the process of getting times that Jeff is available between 1/26 and 2/2/12 and will get back to you with a list of dates and times.

That said I would like hear from you what Stevens has and has not done and what you HydroQual to do with respect to boundary loads for the Saddle River and Dundee Dam.

Antony and I are free most of Thursday 1/26 if you pick a time for a short call we should be able to accommodate you.

I suggest we use the following conference number

Call in Number = 866-299-3188  
Code # = 212-637-3823#

Thanks

Felix
